

PENDING CLAIMS

1. (Previously presented) A method for treating a human with a stimulant dependency, said method comprising administering to said human pramipexole in a dose ranging from 1.5 mg/day to 6.0 mg/day.
2. (Original) The method of claim 1, wherein said stimulant dependency involves a stimulant craving.
3. (Original) The method of claim 1, wherein said stimulant is cocaine.
4. (Previously presented) A method of treating a cocaine craving in a human, said method comprising administering to said human pramipexole in a dose ranging from 1.5 mg/day to 6.0 mg/day.
5. (Original) The method of claim 1 or 4, wherein said method further comprises administering to said human a therapeutically-effective amount of an antidepressant.
6. (Original) The method of claim 1 or 4, wherein said method further comprises administering to said human a therapeutically-effective amount of an anticonvulsant.
7. (Original) The method of claim 6, wherein said anticonvulsant is lamotrigine.
8. (Previously presented) The method of claim 1, wherein said pramipexole is administered in a dose ranging from 1.5 mg/day to 4.5 mg/day.
9. (Previously presented) The method of claim 4, wherein said pramipexole is

administered in a dose ranging from 1.5 mg/day to 4.5 mg/day.

10. (Previously presented) A method for treating a human with a stimulant dependency, said method comprising administering to said human a therapeutically effective amount of pramipexole and a therapeutically effective amount of an antidepressant.

11. (Previously presented) A method for treating a human with a stimulant dependency, said method comprising administering to said human a therapeutically effective amount of pramipexole and a therapeutically effective amount of an anticonvulsant.

12. (Previously presented) A method for treating a human with a cocaine craving dependency, said method comprising administering to said human a therapeutically effective amount of pramipexole and a therapeutically effective amount of an antidepressant.

13. (Previously presented) A method for treating a human with a cocaine craving in a human, said method comprising administering to said human a therapeutically effective amount of pramipexole and a therapeutically effective amount of an anticonvulsant.

14. (Previously presented) The method of claim 11 or 13, wherein said anticonvulsant is lamotrigine.

15. (Previously presented) A method for treating a human with a stimulant dependency, said method comprising administering to said human pramipexole, wherein said pramipexole is administered intranasally.

16. (Previously presented) The method of claim 15, wherein said stimulant dependency involves a stimulant craving.

17. (Previously presented) The method of claim 16, wherein said stimulant is cocaine.

18. (Previously presented) A method of treating a cocaine craving in a human, said method comprising administering to said human pramipexole, wherein said pramipexole is administered intranasally.

19. (Previously presented) The method of claim 15 or 18, wherein said pramipexole is administered in a dose ranging from 1.5 mg/day to 6.0 mg/day.

20. (Previously presented) The method of claim 19, wherein said pramipexole is administered in a dose ranging from 1.5 mg/day to 4.5 mg/day.

21. (Previously presented) The method of claim 15 or 18, further comprising administering to said human a therapeutically effective amount of an antidepressant.

22. (Previously presented) The method of claim 15 or 18, further comprising administering to said human a therapeutically effective amount of an anticonvulsant.

23. (Previously presented) The method of claim 22, wherein said anticonvulsant is lamotrigine.
